Project 3

Intern Name: PEEYUSH JENA

Project Track: Data Analytics

Phase: Project 3 — SQL Analysis

Date: May 27, 2026

1. Objective

The primary objective of this phase is to utilize SQL queries to extract meaningful business insights from the orders dataset. This analysis focuses on summarizing volume, revenue, and performance metrics to support data-driven decision-making.

2. Tool Used

The extraction process was performed using Oracle SQL*Plus 11.2.0.2.0 to ensure high data accuracy and analytical integrity.

3. Queries & Results

The following table outlines the specific extraction logic applied to the dataset to retrieve key business metrics:

4. Key Findings

Following the execution of the SQL queries, the following metrics were successfully extracted:

- **Total orders analyzed:** **10** orders were successfully processed within the Oracle environment.
- **Total revenue generated:** Aggregated sales revenue reached **12,896.40**.
- **Average order value:** The mean transaction value was calculated at **1,289.64**.
- **Most ordered product:** Phone emerged as the top product with 3 recorded orders.
- **High-value orders:** A total of 4 orders exceeded the 1,000 threshold.

5. Conclusion

SQL queries successfully extracted key business metrics using SELECT, WHERE, GROUP BY, and ORDER BY clauses to ensure absolute accuracy in our findings. This structured approach confirms the dataset's alignment with business reporting requirements.
