

Data Cleaning Change Log — DecodeLabs Project 1

Project Overview

Intern Name: PEEYUSH JENA
Project Track: Data Analytics
Phase: Project 1 — Data Cleaning & Preparation
Date: May 22, 2026

The primary objective of this phase is to establish data integrity by transforming a raw, unrefined dataset into a reliable source for analytical modeling. This log documents every transformation performed to ensure the final output meets the DecodeLabs qualification criteria: zero duplicate IDs and zero incorrectly formatted dates.

Change Documentation

ID	Data Category	Issue Identified	Action Taken	Status
1.1	Unique Identifiers	Presence of duplicate record IDs.	Executed deduplication logic to retain only unique primary keys.	Complete ▾
1.2	Missing Values	Null or empty values found in critical data fields.	Identified missing entries and applied appropriate imputation or removal based on context.	Complete ▾

ID	Data Category	Issue Identified	Action Taken	Status
1.3	Temporal Data	Inconsistent date formats (MM/DD/YYYY vs DD-MM-YYYY).	Standardized all temporal entries to a unified format to meet zero-error criteria.	Complete ▾
1.4	Numeric Values	String-based characters found in quantitative columns.	Cast columns to numeric types and corrected formatting for analytical readiness.	Complete ▾
1.5	Categorical Text	Case-sensitivity issues and trailing whitespace in string fields.	Applied text normalization (trimming and standard casing) across the dataset.	Complete ▾

Verification Summary

Following the data transformation steps, a final audit was conducted to verify compliance with the industrial training kit standards:

- **Duplicate Check:** A validation script confirmed 0 duplicate IDs remain in the dataset.
- **Format Check:** All date fields were audited to ensure 100% adherence to the required formatting logic.
- **Integrity Check:** Missing values were successfully addressed, ensuring the foundation for predictive modeling is robust.

Intern Acknowledgment

I, PEEYUSH JENA, certify that the steps outlined above have been completed with the analytical precision required by DecodeLabs to ensure absolute accuracy in our findings.
