

EDA Report — DecodeLabs Project 2

1. Problem Statement

Intern Name: Peeyush Jena
Project Track: Data Analytics
Phase: Project 2 — Exploratory Data Analysis (EDA)
Date: May 23, 2026

The objective of this analysis is to explore the DecodeLabs sales dataset containing 1,200 orders to uncover key business patterns, trends, and anomalies.

2. Key Statistics

Metric	Value
Total Orders	1200
Total Revenue	1,264,761.96
Average Order Value	1053.97
Median Order Value	823.62
Highest Order Value	3456.40
Lowest Order Value	11.39

3. Key Findings

Finding 1 — Revenue Gap: The average order value (1053.97) is significantly higher than the median (823.62). This indicates high-value outlier orders are skewing the average upward.

Finding 2 — Product Performance: Printer emerged as the most frequently ordered product, indicating strong demand in the B2B and office supplies segment.

Finding 3 — Order Status: Pending was the most common order status, suggesting a significant volume of unprocessed orders that require operational attention to improve fulfillment speed.

Finding 4 — Payment Method:Online payment was the most preferred payment method among customers, indicating strong digital adoption across the customer base.

4. Outlier Detection

Orders below 11.39 and above 3456.40 represent extreme values requiring further investigation for potential data entry errors or VIP customers.

5. Recommendations

- Focus marketing on top performing products
- Investigate high value orders for VIP customer segmentation
- Address high cancellation/return rates if found

Intern Acknowledgment

I, PEEYUSH JENA , certify that the exploratory data analysis outlined above has been completed with the analytical precision required by DecodeLabs to ensure absolute accuracy in our findings.
