

Data Visualization Report — DecodeLabs Project 4

Project Overview

Intern Name: PEEYUSH JENA

Project Track: Data Analytics

Tool Used: Microsoft Excel — Charts and Visualization module

Phase: Project 4 — Data Visualization

Date: May 21, 2026

1.Objective

The objective of this project is to create visual representations of the DecodeLabs sales dataset to communicate key business insights clearly and effectively. This report details the specific charts generated and the analytical conclusions derived from the dataset.

2. Tool Used

Microsoft Excel — Charts and Visualization module

3.Visualization Documentation

Chart 1 — Orders by Product (Bar Chart)

Insight: Printer had the highest number of orders, indicating strong demand in office equipment segment.

Chart 2 — Order Status Distribution (Pie Chart)

Insight: Orders are fairly distributed across all statuses with Pending being the most common.

Chart 3 — Revenue by Product (Bar Chart)

Insight: High unit price products like Monitor and Tablet contribute significantly to total revenue.

Chart 4 — Payment Method Distribution (Line Chart)

Insight: Online and Debit Card are the most preferred payment methods among customers.

4.Key Insights Summary

Based on the visualizations created, the following trends were identified within the DecodeLabs sales environment:

- **Product Demand:** Printer is the most ordered product, indicating strong demand in office equipment.
- **Order Workflow:** Orders are evenly spread across all statuses, suggesting a consistent processing cycle.
- **Payment Trends:** Online payment remains the most preferred method among the customer base.

- **Revenue Generation:** High value products like Monitors and Tablets drive the majority of total revenue.

5. Intern Acknowledgment

I, PEEYUSH JENA, certify that the visualizations successfully communicate the key patterns in the dataset, enabling stakeholders to make informed business decisions at a glance.
